

## Grains/Breads Servings for Grades K-12 in the Afterschool Snack Program

The ASP meal pattern for grades K-12 lists the required amount for the grains/breads component in servings. The U.S. Department of Agriculture's (USDA) [Exhibit A: Grain Requirements for Child Nutrition Programs](#), summarizes the servings for nine groups (A-I) of grain foods. The chart in this document lists the Exhibit A grain servings that apply to the meal patterns for grades K-12 in the Afterschool Snack Program (ASP) of the National School Lunch Program (NSLP).

The amount of a creditable grain food that provides one serving of the grains/breads component varies because different types of foods contain different amounts of creditable grains. For example, to credit as one serving, a roll must weigh 25 grams and a blueberry muffin must weigh 50 grams. The minimum amount that credits toward the grains/breads component is  $\frac{1}{4}$  serving.

### Creditable grain foods

To credit as the grains/breads component in the ASP meal pattern for grades K-12, grain products and recipes must be made with creditable grains. Creditable grains include whole grains, enriched grains, bran, and germ. **Note:** Bran and germ do not credit in the NSLP and School Breakfast Program (SBP) meal patterns for grades K-12.

Creditable foods include products and recipes that are enriched, whole grain, or whole-grain rich (WGR). Creditable cooked and ready-to-eat (RTE) breakfast cereals include products that are enriched, whole grain, WGR, or fortified. For additional guidance on creditable grains, refer to the Connecticut State Department of Education's (CSDE) resources, [Crediting Whole Grains in the NSLP and SBP](#), [Crediting Enriched Grains in the NSLP and SBP](#), and [Crediting Breakfast Cereals for Grades K-12 in the NSLP and SBP](#).

The ASP meal pattern for grades K-12 does not have a WGR requirement. The CSDE encourages SFAs to serve WGR foods (including 100 percent whole grains) most often.

### Using the grains/breads servings chart

This chart determines the required quantity for commercial grain products and may also be used for recipes if the menu planner knows the **weight** of the prepared (cooked) serving. If the recipe does not provide this information, the average weight per serving can be determined by weighing several servings of the recipe (refer to the CSDE's [Yield Study Data Form for Child Nutrition Programs](#)). For guidance on determining the grains/breads servings in a commercial grain product or a recipe, refer to the CSDE's resource, [Calculation Methods for Grains/Breads Servings for Grades K-12 in the ASP](#).
